Saffrat Tech: Your Shop's Digital Manager

A simple, practical guide to running your shop smarter — from taking your first order to closing the books at night. Version 2.2 · April 2026 · Professional Use Only

YOUR COMPLETE DAILY GUIDE

Welcome to Saffrat Tech!

Think of Saffrat Tech as the **"brain" of your shop.** It handles everything from taking a customer's order at the counter to tracking every riyal you spend on flour and oil. It's designed to do the heavy lifting — the math, the record-keeping, the reports — so you can focus on what matters most: serving great food.

Whether you're running a small takeaway window or a full sit-down restaurant, this app grows with you. No accounting degree required. No paper ledgers. Just a clean, simple screen that keeps your business honest and organized every single day.

Saffrat Tech handles double-entry accounting automatically in the background. You'll never need to touch a spreadsheet again.

What Saffrat Tech Covers

01

Orders & POS

Take orders at the table, counter, or delivery

02

Stock & Supplies

Track every ingredient automatically

03

Accounting

Sales, expenses, and cash — all recorded

04

Team & Partners

Staff hours, pay, and partner equity

05

Reports & AI

Ask questions, get instant answers

Getting Your Shop Ready

Before you serve your first customer, spend a few minutes in the **Settings menu** to set the "rules" for your business. You only need to do this once.

⏰ General Settings

Set your local time zone and currency so every receipt, report, and timestamp looks exactly right for your location.

🧾 Taxes

Enter your tax rate once. From that point on, the app will automatically add the correct tax to every single bill — no manual math needed.

✉️ Emails

Customize the messages sent to customers and staff so they feel like they're coming from your brand, not a generic system.

🪑 Tables

If you have a seating area, draw your layout here and number your tables so waiters always know exactly where to go.

Your Food & Drinks Menu

A clean, well-organized menu makes service faster, reduces mistakes, and helps the app track your stock automatically every time you make a sale.

Food Groups

Create categories like **"Main Dishes,"** "Samosa Packs," or "Cold Drinks." These help staff find items fast during a busy rush.

Food Items

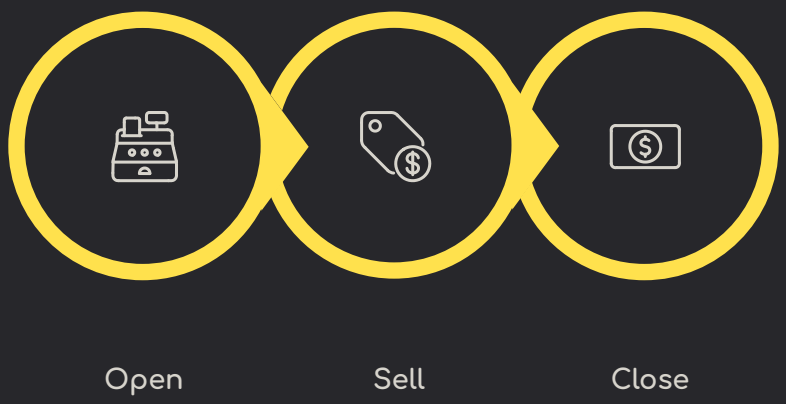
Add each dish and list its ingredients. When you sell a samosa, the app automatically deducts flour and onion from your pantry stock — no manual counting needed.

Add-Ons (Modifiers)

Create options like **"Extra Spicy,"** "Add Cheese," or "No Onions." Staff can tap them during an order so the kitchen always gets it right.

Your Daily Routine: Opening & Closing

To keep your money perfectly accurate, follow this simple **"Start and End"** routine every single day. It takes less than five minutes and keeps your books honest.



The app compares what's physically in the drawer against what your sales and expenses say should be there. If there's a gap, it flags it immediately so you can investigate — before the day is over.

🌅 Starting the Day

Go to **Sale → Cash Register.** Count the money in your drawer and type it in as your "Opening Balance." The shop is now ready to track every transaction.

🌙 Ending the Day

Make sure all orders are completed. Go back to **Cash Register → End Session.** Type in the physical amount in the drawer. Done!

Serving Your Customers (POS)

This is the screen your team uses every day to take orders and collect payment. It's designed to be fast, clear, and hard to mess up — even during the busiest rush.

Taking an Order

Tap the **table number,** or select Takeaway or Delivery. As you tap items, the kitchen sees the order instantly on their display. Add modifiers like "No Onions" so the kitchen always gets it right. For groups, use the Split Bill feature to move items to separate bills with one tap.

Getting Paid

When the customer is ready, tap **Settle.** Choose Cash, Card, or Phone payment. The moment the sale is done, the app records the income in your digital books automatically — no extra steps, no manual entry required.

Managing Your Supplies & Stock

🛒 Buying Ingredients

When you buy supplies — like a 20kg bag of flour — go to **Purchase → Add Purchase.** Select the supplier, price, and amount. The app immediately adds the flour to your pantry and records whether you paid cash or owe the supplier money.

🗑️ Reporting Waste

Sometimes things spoil or break. Go to **Ingredients → Stock Adjustment,** select "Wastage," and note what was lost and why (e.g., "5kg Chicken — Expired"). This keeps your books honest and helps you understand why profit might dip in a given week.

> Recording waste is just as important as recording sales. It's how you know your true food cost.

The Digital Accountant

You don't need to be a math expert. The app does **double-entry accounting automatically** every time you sell food, buy stock, or record an expense. Here's how your money is organized:

Assets

Things you own — cash in the drawer, food in the pantry

Liabilities

Money you owe — unpaid bills to suppliers

Equity

What the owners have invested in the business

Revenue

Money earned from selling food and drinks

Expenses

Money spent on rent, salaries, and supplies

💵 The Digital Wallet (Petty Cash)

If you take 50 Riyals from the drawer to buy cleaning supplies or fuel, record it in the **Cash Ledger.** This replaces those old paper petty cash books and keeps your balance sheet perfect. Every small expense counts!

Sharing the Business

If your shop has partners: record each person's initial investment, log any personal withdrawals as "Drawings," and let the app calculate each partner's share of the profit automatically.

Looking After Your Team & Who Can Do What

👥 HRM — Your Team Tools

→ Attendance

Staff clock in and out on the app — you always know exactly when they worked.

→ Vacations

Keep a shared calendar of who is on leave or sick so you're never caught short-staffed.

→ Payday

At month-end, the app calculates everyone's pay automatically — including advances and split payments.

Split Pay: If an employee needs an advance, record a partial payment. The app lowers "salary owed" and updates your cash records instantly.

🔑 User Portals — The Right Keys for the Right People

Waiters

A simple order-taking screen on a tablet or phone — nothing else to distract them.

Delivery Drivers

A focused view showing exactly where to go and what to deliver.

Customers

Keep a list of regulars to track preferences and outstanding balances.

Your AI Assistant & Golden Rules

💬 Chatting With Your Data

Go to the **AI Assistant** and just ask a question like you'd ask a friend. No special commands or technical knowledge needed.

"How much cash is in the bank right now?"

"What was our best-selling samosa pack last week?"

"How much have we spent on onions this month?"

The app looks at your live data and gives you a simple, professional answer instantly.

✅ Simple Rules to Stay Organized

Always End Session

Before the next staff member takes over the drawer — every single shift.

Record It Now

Log expenses as they happen. If you wait, you'll forget!

Trust the Audit Trail

The app remembers who made every entry. This keeps everyone honest.

Trust the System

Let the app handle the math. Only authorized accountants should make manual changes.
