Saffrat Tech: Restaurant Business Management Suite

Operations Manual — Enterprise Edition

Version 1.0

March 2026

Made with GAMMA

CHAPTER 1

Executive Summary

The **Al Markiya Business Management Suite** is a unified .NET Core 8 enterprise solution purpose-built for the hospitality and retail sectors. It brings together four mission-critical systems into a single, cohesive platform.

- Real-Time POS
- Inventory Control
- HR Management
- Double-Entry Accounting

CHAPTER 2

Daily Operational Lifecycle

Data integrity depends on the structured opening and closing of business sessions. The system operates within **Work Periods** to ensure complete cash reconciliation.

🌅 Starting the Day

Navigate to **Sale → Cash Register** and enter the **Opening Balance** (initial cash-in-hand). This initializes the session and begins tracking all cash and bank inflows.

🌙 Ending the Day

Ensure all running orders are settled first. Enter the **Closing Balance**. The system auto-calculates Net Balance and flags any variance in the Reconciliation Report.

CHAPTER 3

Point of Sale (POS) Workflows

The POS module is the primary revenue generator and data entry point for all sales transactions across your operation.

Order Management

Supports **Dine-In**, **Takeaway**, and **Delivery**. Add modifiers (e.g., "Extra Cheese") that update the Kitchen Display and adjust ingredient costs dynamically. Use **Split Order** for separate guest payments.

Settle & Payment

Accept **Cash**, **Credit Card**, and **Digital Wallets**. Finalizing an order triggers automated ledger entries — debiting Cash/Bank, crediting Sales Revenue, and crediting Sales Tax Liability.

Made with GAMMA

CHAPTER 4

Accounting & Financial Data Entry

The accounting module serves as the **General Ledger** of your business, following Standard Accounting Practices.

Chart of Accounts

1

0 — Assets

Cash, Inventory, Accounts Receivable

2

1 — Liabilities

Sales Tax, Accounts Payable

3

2 — Equity

Partner Capital, Retained Earnings

4

3 — Revenue

Food Sales, Delivery Charges

5

4 — Expenses

COGS, Salaries, Utilities

Cash Ledger & Accounts Payable

Petty Cash Entry

Navigate to **Accounting → Cash Ledger → Add Transaction**. Specify type (Expense/Income), select the offset account (e.g., "Electricity Expense"), and add a description. The system validates debits and credits before saving.

Supplier Bills (AP)

Go to **Purchase → Add Purchase** and enter invoice details. Saving simultaneously updates **Inventory Levels** and records an **AP Bill** in the accounting engine — keeping stock and financials in sync.

CHAPTER 5

Inventory & Stock Control

Accurate balance sheets require physical inventory to match system records. The suite provides two key adjustment mechanisms to maintain data integrity.

Manual Adjustment

Used for count corrections when physical stock differs from system records after periodic audits.

Wastage Logging

Used for expired or damaged goods. Creates a **DEBIT** to "Stock Wastage Expense" and a **CREDIT** to "Inventory Asset," immediately reflected in your P&L.

Made with GAMMA

CHAPTER 6

Partner Equity Management

A transparent portal for business owners to track capital, withdrawals, and profit distribution in real time.

01

Initial Capital

Recorded as an Investment to the partner's equity account at onboarding.

02

Drawings

Partners record personal withdrawals, which automatically reduce their equity balance.

03

Profit Distribution

Periodically move Net Income to partner accounts based on ownership percentage.

CHAPTER 7

Reporting & AI Analysis

Financial Statements AI Assistant

Executives can query the system using **natural language**. The AI queries your SQL schema directly for instantaneous, accurate responses.

Balance Sheet

Real-time view: Assets = Liabilities + Equity

Profit & Loss

Detailed Net Income over any custom date range

"What is our current cash balance?"

"Show me the top 5 expenses this month."

"Calculate the ROI for Partner X."

Made with GAMMA

CHAPTER 8

Best Practices for Data Integrity

Follow these critical guidelines to maintain accurate, audit-ready records across every shift and transaction.

Shift Handover

Always end the Work Period before a change of staff. This ensures each shift's cash position is independently verified and reconciled.

Real-Time Entry

Log expenses as they occur to prevent reconciliation errors. Delayed entries are the leading cause of end-of-day discrepancies.

Audit Trails

All entries — POs, Sales, Journals — automatically record the **CreatedBy** user for full accountability and compliance.
